# South Downs College, Hampshire Air cabin crew training facility

The South Downs College is a successful and thriving general further education college located on the attractive south coast of Hampshire.

The project comprised installation of a part section of a Boeing 747 Fuselage to provide a realistic environment and unique facility to run a course aimed at adults looking for a career as Air Cabin Crew.

Duties involved construction detailing for the installation and upgrading of the fuselage to achieve Building Regulation compliance and provision of suitable information to enable competitive contractor pricing.

The programme for installation was fast track to achieve fixed dates for road closures for transportation of the fuselage to site and to meet College targets for occupation.

Following briefing meetings it was apparent that the specialist services of a Structural Engineer and Mechanical and Electrical Engineer were required. Baqus engaged the services of the required consultants and undertook to lead the design team including coordination and project management for the delivery of the design and construction.

Baqus have been retained by the College; completed projects include: condition survey of all buildings with planned maintenance costs; teaching and salon space extensions, alterations to provide new reception area and interview rooms.
